Project Title: Snakes in Mythology Website

https://en.wikipedia.org/wiki/Snakes_in_mythology

I would like to build a multi-page website exploring snakes as symbols in mythology worldwide. Snakes often play a circular "reincarnated" role, and also feature in many mythologies across the world, so I would like to emphasize their universal quality. I plan on having a site landing page with a navigation menu hidden in a snake arranged as a circle covered in stars (points). When hovered over, these points become a link. I would include a more conventional navigation option, either a radio button menu or a back button, that lets a user navigate without this option as well. My stylistic inspirations are zodiac signs, maps of the night sky, white lineart illustrations on black backgrounds, and nonlinear/circular site navigation options.

- Landig Page/Introduction – introduce snakes' role in mythology, feature the circular snake menu, and intrigue with the navigation style
- (potential) – additional page discussing snakes' general role in mythology, if want landing page to only be navigation menu
- Immortality
- Creation
- Underworld
- Water
- Wisdom
- Healing
- Gods (snake gods in different cultures)
- Myths (may group w/ references) – examples of additional snakes in myths
- References
